SUMMARY

Cloud Architect experienced in designing, migrating and securing production workloads on AWS and Azure, with a graduate specialization in Cloud Architecture. Led an end-to-end enterprise migration from on-premises to a containerized AWS platform, and hardened cloud accounts for a regulated insurer by shifting security into delivery pipelines. Combines architecture and security depth to deliver highly available, cost-optimized and compliant systems aligned to the AWS Well-Architected Framework. Provincial gold and national silver medalist in Cloud Computing at the Skills Ontario and Skills Canada 2026 competitions.

TECHNICAL SKILLS

Cloud Platforms: AWS (primary), Microsoft Azure, multi-account and hybrid architectures

Compute and Containers: ECS Fargate, Amazon EKS, EC2, Docker, Kubernetes

Networking and Edge: VPC, CloudFront, Route 53, VPN Gateway, Azure Arc, DNS, load balancing

Data and Storage: RDS Aurora, ElastiCache, Azure SQL, Cosmos DB, S3

Security and Governance: IAM, KMS, AWS WAF, least-privilege design, encryption, cost governance

IaC and Automation: Terraform, AWS CDK, CloudFormation, GitHub Actions

Observability and Ops: CloudWatch, auto-scaling, disaster recovery, high availability, SRE practices

AI and Contact Center: Amazon Connect (IVR), Lex, Polly, Transcribe, Bedrock foundations

Scripting: Python, PowerShell, Bash, SQL

PROFESSIONAL EXPERIENCE

Intact Financial Corporation

Jan 2025 - Apr 2025

Cloud Security Engineer

Toronto, Canada

- Embedded with the cloud security team at a regulated insurer to harden AWS accounts and shift security into the pipelines application teams used to provision infrastructure.
- Built secure-by-default Terraform baselines that enforced network segmentation, least-privilege IAM and mandatory KMS encryption, so teams provisioned compliant environments without hand-rolled, drift-prone configurations.
- Added automated policy checks and security scanning to GitHub Actions pipelines, blocking non-compliant changes such as open security groups, unencrypted storage and wildcard IAM before they reached production.
- Remediated open security-scan findings by scoping over-permissive IAM to least-privilege and closing encryption and public-access gaps on S3 and RDS, clearing the backlog ahead of an internal compliance review.

Persistent Systems

Feb 2022 - Feb 2024

Cloud Architect

Pune, India

- Led the end-to-end migration of an enterprise retail client's monolithic on-premises application to AWS after the platform buckled under seasonal traffic and took weeks to ship changes, owning the target architecture, migration plan and production cutover.
- Re-platformed the application onto ECS Fargate behind an Application Load Balancer, fronted with CloudFront and AWS WAF, and migrated the on-premises database to RDS Aurora using AWS DMS with a rehearsed, near-zero-downtime cutover in a weekend window.
- Automated provisioning of the full stack of networking, compute, data and IAM with reusable Terraform modules and GitHub Actions CI/CD, taking releases from manual, multi-week cycles to on-demand deployments in under an hour.
- Designed multi-AZ high availability with auto-scaling, automated backups and a DR strategy to defined RTO/RPO targets, so the platform absorbed peak-season load without the outages seen in prior years, monitored through CloudWatch dashboards and alarms.
- Reduced the client's monthly cloud cost by right-sizing compute and planning reserved capacity, and hardened the account with IAM least-privilege and KMS encryption as standard.

PROJECTS

House of North - Live E-Commerce Platform on AWS | *Terraform, ECS Fargate, Aurora, CloudFront, WAF*

- Designed and operate a live AWS platform end to end, with the storefront on ECS Fargate behind CloudFront and WAF, an Aurora data tier and every environment provisioned through Terraform for reproducible, one-command rebuilds.
- Built an automated Amazon Connect voice flow using Lex, Polly and Transcribe to deflect routine support contacts, securing customer data with IAM least-privilege and KMS.

Containerized Workloads on Amazon EKS | *Kubernetes, IAM, autoscaling*

- Engineered a production-grade Kubernetes operating model on Amazon EKS with scoped per-pod IAM, templated deployments and demand-based autoscaling for stateless services under variable load.

Azure Hybrid Cloud and Disaster Recovery | *Azure Arc, VPN Gateway, Azure SQL*

- Designed and DR-tested a hybrid architecture linking on-premises to Azure over VPN, with unified inventory and policy through Azure Arc and validated recovery targets.

Build Roulette - buildroulette.dev | *Architecture Decision Records*

- Documented 5 Engineering Decision Records capturing the options weighed, trade-offs and final call for each core design choice, the kind of written reasoning senior architecture reviews expect.

EDUCATION

Seneca Polytechnic	Sep 2025 - Apr 2026
<i>Postgraduate, Cloud Architecture and Administration - GPA 4.0/4.0</i>	<i>Toronto, Canada</i>
Georgian College	May 2024 - Apr 2025
<i>Postgraduate, Cybersecurity - GPA 4.0/4.0</i>	<i>Toronto, Canada</i>
SVKM's Institute of Technology	2018 - 2022
<i>B.Tech, Computer Engineering</i>	<i>Dhule, India</i>

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified AI Practitioner
- AWS Certified Cloud Practitioner
- CrowdStrike - 28 certifications across 7 domains (2025)
- Google Cybersecurity Professional Certificate (2023)
- 6+ AWS trainings across GenAI, Developer and Security domains

AWARDS

- Gold Medal, Cloud Computing** - Skills Ontario Competition 2026
- Silver Medal, Cloud Computing** - Skills Canada National Competition 2026
